

Who Says “Yes”?

A Machine Learning Approach to Bank Marketing

Presenter: Zhang Jingyi

Core XGBoost Objective

$$L^{(t)} \approx \sum_{i=1}^n \left[g_i f_t(x_i) + \frac{1}{2} h_i f_t(x_i)^2 \right] + \Omega(f_t)$$

- g_i : First-order gradient (direction)
- h_i : Second-order gradient (step size)
- $\Omega(f_t)$: Regularization (prevent overfitting)

- **Demystifying SHAP**

- **Result Analysis:**

Model	MCC	F1-score	Precision	Recall	Accuracy
XGBoost (Full features)	0.5151	0.5961	0.5076	0.662	0.8537
XGBoost (Select Features)					
XGB+RF					

SHAP Analysis: The Key to Opening the ML Black Box

Key Driver

- Duration
- Engaged customers talk longer.

Impact Direction:

- Sales should focus on retaining customers with long call times.

Individual Instance Explanation:

- A call lasting **192 seconds**.
- decreased the predicted likelihood of subscription.

SHAP Analysis: The Key to Opening the ML Black Box

SELECTED FEATURES

duration, housing, poutcome,
month, contact, previous,
campaign, age, education

Core XGBoost Objective

$$L^{(t)} \approx \sum_{i=1}^n \left[g_i f_t(x_i) + \frac{1}{2} h_i f_t(x_i)^2 \right] + \Omega(f_t)$$

- g_i : First-order gradient (direction)
- h_i : Second-order gradient (step size)
- $\Omega(f_t)$: Regularization (prevent overfitting)

- ✓ Demystifying SHAP
 - From Black Box to Transparency
- ✓ Result analysis
 - Full Features**: Baseline with noise.
 - Feature-Selected**: ↑Recall, ↓Precision.
 - Ensemble (Optimal)**: ↑Overall Performance

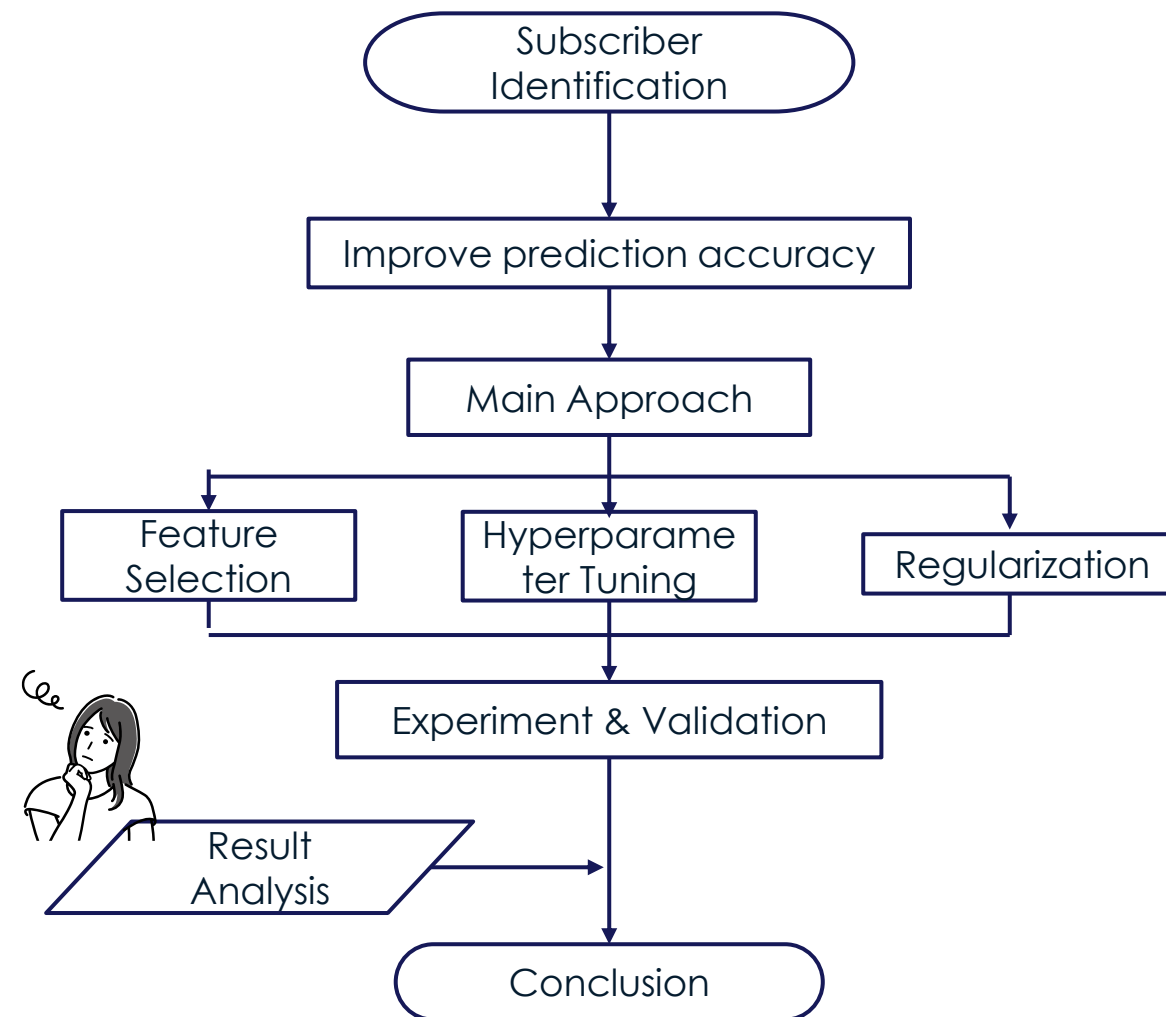

Model	MCC	F1-score	Precision	Recall	Accuracy
XGBoost (Full features)	0.5151	0.5961	0.5076	0.662	0.8537
XGBoost (Select Features)	0.5096	0.5908	0.4776	0.7001	0.8432
XGB+RF	0.532	0.6045	0.5242	0.6728	0.8575

Model Performance Heatmap

Model Name	Performance Metrics				
	MCC	F1	Precision	Recall	Accuracy
LightGBM	0.575	0.624	0.544	0.735	0.897
LDA+RF	0.536	0.590	0.495	0.729	0.881
XGB+RF	0.532	0.605	0.524	0.673	0.858
Interaction + Stacking + RF	0.530	0.587	0.525	0.664	0.891
SVM	0.528	0.622	0.487	0.724	0.889
Feature Selection + LDA	0.517	0.562	0.441	0.786	0.858
Baseline LDA	0.516	0.564	0.439	0.786	0.888
XGBoost Full Features	0.515	0.596	0.508	0.662	0.854
LASSO	0.511	0.556	0.425	0.804	0.850
ELASTIC	0.510	0.555	0.424	0.803	0.850
XGBoost Selected Features	0.510	0.591	0.478	0.700	0.843
NN	0.509	0.611	0.471	0.710	0.886
GLM	0.508	0.554	0.423	0.800	0.849
ELASTIC + RF	0.473	0.501	0.675	0.398	0.907
LASSO + RF	0.469	0.499	0.663	0.401	0.906
Random Forest	0.452	0.483	0.650	0.384	0.904
Decision Tree	0.395	0.466	0.463	0.469	0.874

Relative Performance
Best
Average
Worst

MCC \approx 0.5: A Sign of Real-World Data

The Business Trade-off: Precision vs. Recall

Precision

"How many of the users we called were actually subscribers?"

It's about cost efficiency.

Recall

"How many of the actual subscribers did we successfully find?"

It's about capture rate.

Precision vs Recall scatter graph

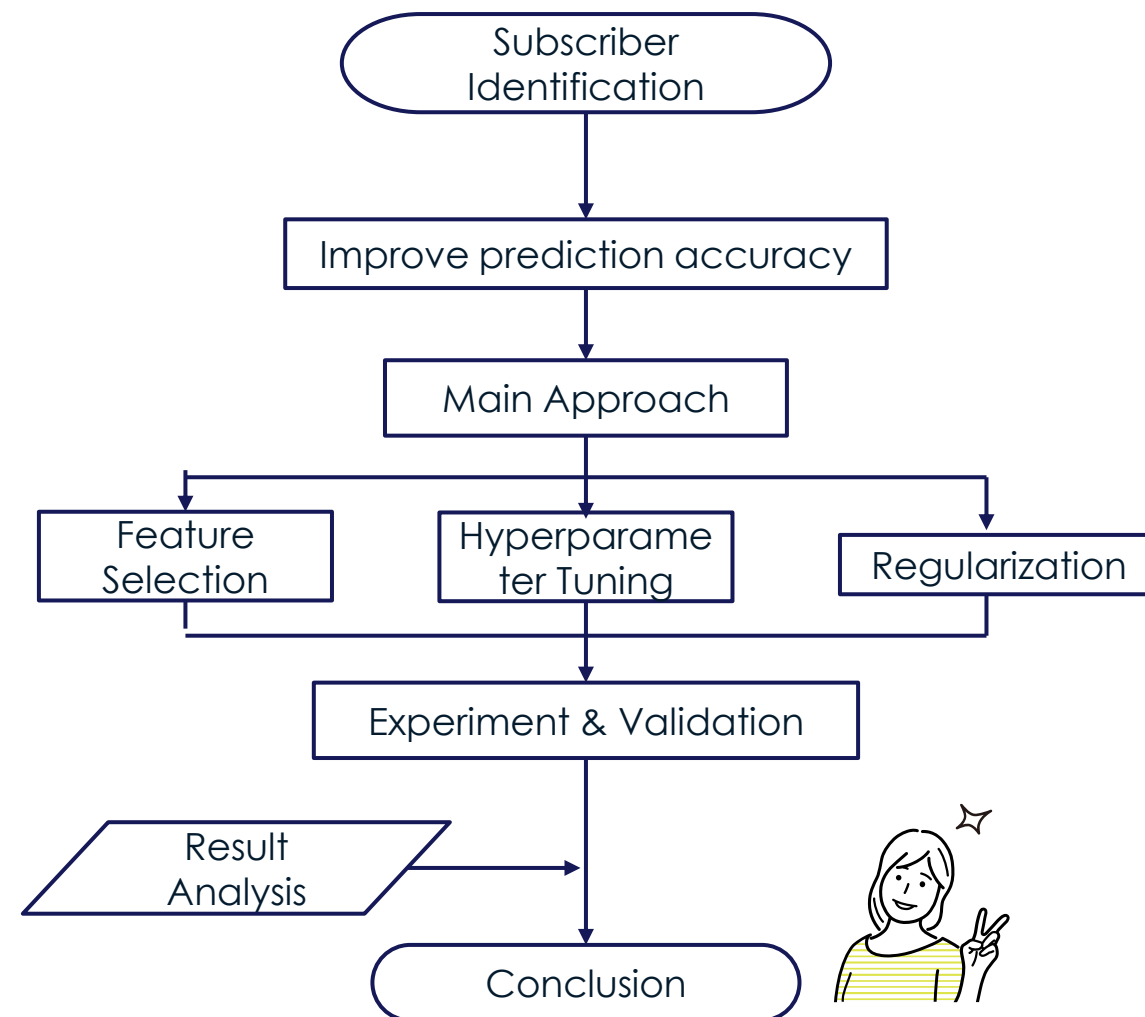

MCC bar chart

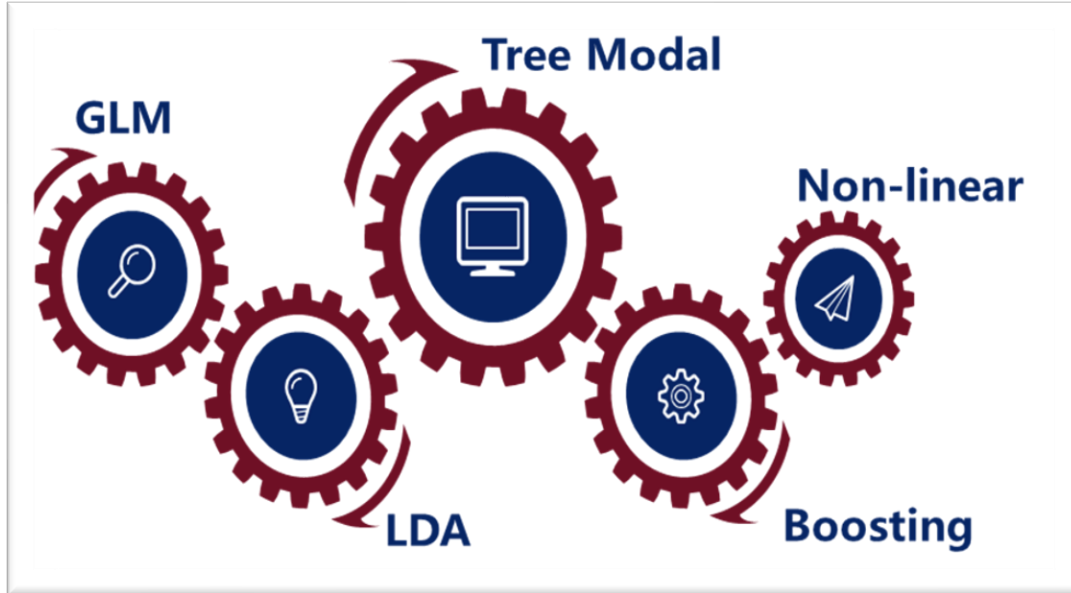

- A. High-Recall Models (Customer Acquisition Focus)—— LASSO Maximizes customer coverage at the cost of more ineffective calls.
- B. High-Precision Models (Cost-Control Focus)—— ELASTIC+RF Ensures reliable predictions but may miss some potential subscribers.
- C. Balanced Models (Optimal Overall Performance)——LightGBM Achieves optimal equilibrium between coverage and accuracy for real-world deployment.

Scenario	Objective	Top Model	Key Metric
Market Launch	Max Customer Reach	LASSO	Recall > 0.8
Standard Operations	Balanced Performance	LightGBM	MCC > 0.57
Resource-Rich Period	Maximize Performance	LightGBM / XGB+RF	MCC > 0.57
Cost-Sensitive Period	High Conversion Rate	ELASTIC + RF	Precision > 0.66
Stable Expansion	Balance & Interpretability	LDA + RF	MCC > 0.53

Final Recommendation: LightGBM

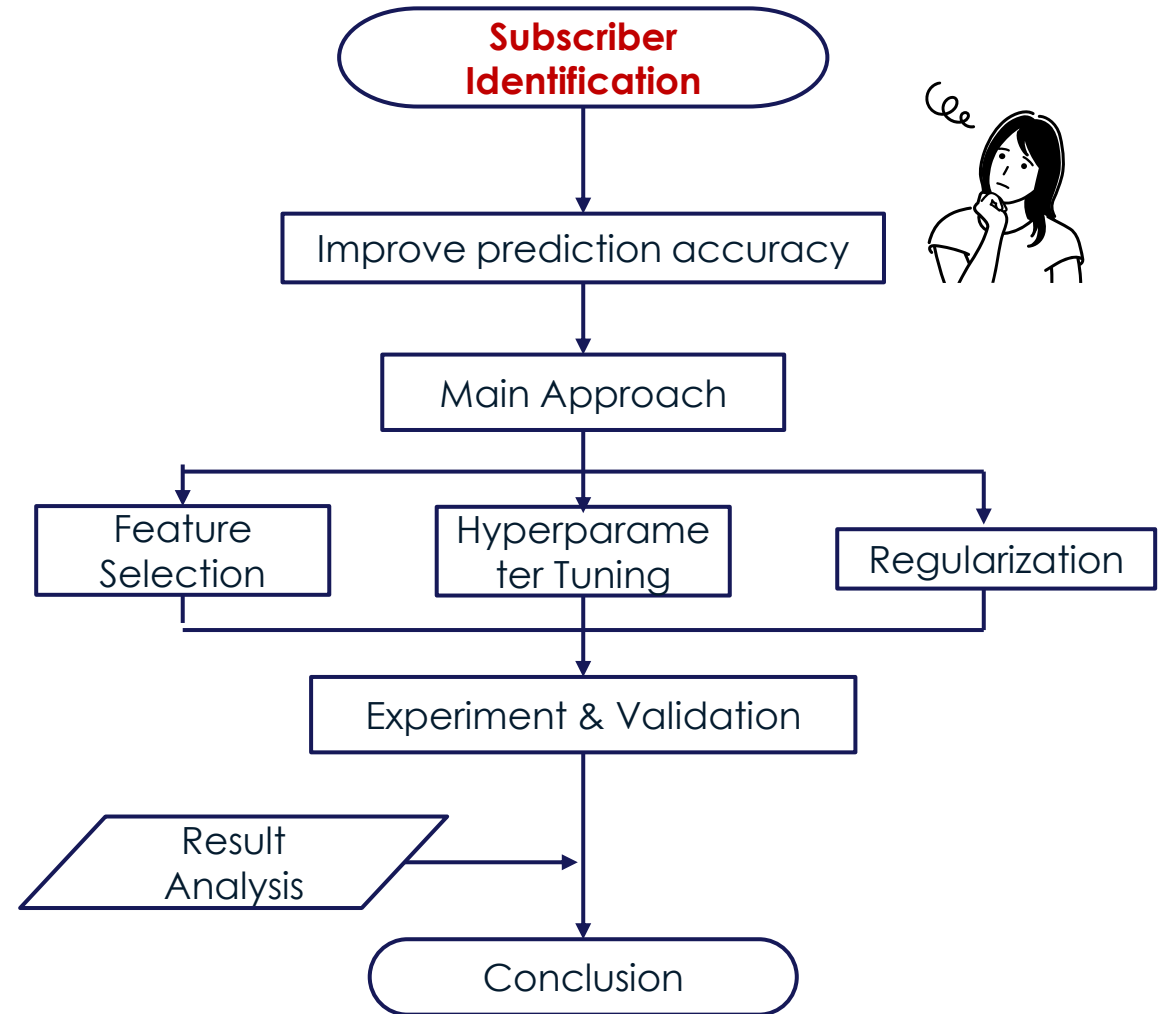

- Leading MCC and well-balanced performance.
- Delivers the most robust and reliable results for deployment.

Interpretability

High Performance

Summary

Data

Modeling

Evaluation

Trade-off

Business Strategy

- Prioritize customers with long call durations.
- Target mobile users.
- Use LightGBM to capture the most value.

Thank you for listening!
