

ZHANG JINGYI

Availability: Immediate start, until June 2026 (**Full-time Credit-bearing**)
Phone: (+65) 8942 4274 | Email: JINGYI021@e.ntu.edu.sg | [Portfolio Website](#)

PROFESSIONAL SUMMARY

Graduate with a Master's in Analytics, with hands-on experience applying machine learning and causal inference methods in applied business and policy contexts. Proficient in Python, R, and SQL, with a strong foundation in NLP, predictive modeling (XGBoost), and statistical analysis. Interested in translating analytical results into interpretable insights to support data-driven decision-making in cross-functional teams.

EDUCATION

Nanyang Technological University (NTU), Singapore **Aug 2025 – Jun 2026 (Expected)**

MSc in Analytics / CGPA: 4.60/5.00

Relevant Modules: *Data Mining (A+); Database System (A); Statistical Modelling & Data Analytics (A)*

Guangdong University of Foreign Studies (GDUFS), China

Sep 2021 – Jun 2025

BSc in Statistics / CGPA: 3.90/4.00 (Degree with Distinction)

Relevant Modules: *Mathematical Statistics (A+); Econometrics (A+); Modern Regression Analysis (A)*

WORK EXPERIENCE & RESEARCH PROJECTS

DataStory Co., Ltd. — Data Analyst Intern | SQL, ABSA, ESG Analytics **Apr 2025 – Jun 2025**

- Analyzed PCHC ad campaigns using SQL/Excel to evaluate creative performance, delivering weekly reports and 10+ Tableau dashboards to inform budget allocation.
- Developed an Aspect-Based Sentiment Analysis model (TF-IDF + SVM, 75% accuracy) on 50K+ reviews to identify key drivers of negative sentiment across product and service dimensions.
- Supported ESG initiatives by quantifying Social-dimension indicators from social media data and developing dashboards to enable cross-functional monitoring of user relations and sentiment trends.

Bank Subscription Prediction | XGBoost, Classification, Model Evaluation **Sep 2024 – Oct 2025**

- Led an 11-member team to frame a bank marketing decision on 45,000+ customers in Python/R, defining an imbalanced (~10%) subscription prediction problem aligned with acquisition–cost trade-offs.
- Owned XGBoost modeling in Python, benchmarking 10 models across GLM, LDA, tree-based, non-linear, and boosting families, and evaluating Precision, Recall, F1, and MCC to quantify decision trade-offs.
- Translated model evidence into 3 deployment regimes across lifecycle stages, recommending LightGBM for recall-driven growth; project earned an A+ grade with professor commendation.

Electric Vehicles: Green or Trade-Off? | Panel Data, Causal Inference **Dec 2024 – Apr 2025**

- Constructed a province-level panel dataset (31 provinces, 2018–2021) using Python (Pandas) to analyze regional heterogeneity in environmental and policy impacts.
- Estimated causal effects using Two-Way Fixed Effects and 2SLS IV models in Stata/Python, mitigating selection bias and isolating true policy drivers.
- Delivered decision-ready insights by identifying clean-grid thresholds for effective EV rollout; awarded "Excellent Graduation Thesis" (A+).

Data Analysis Studio | Leadership, NLP **Jun 2023 – Jun 2024**

- Founded and scaled a data consultancy to 100+ members, leading 30+ analytics projects (e.g., user segmentation) and generating CNY 63,000+ in revenue.
- Standardized analytical workflows by developing reusable Python/R modules for regression and time-series analysis, improving reproducibility and delivery efficiency across projects.
- Led a social governance NLP initiative, building reproducible Python pipelines to transform 20K+ unstructured records into 7 standardized metric categories, securing provincial funding and a "Challenge Cup" Silver Medal.

KEY COMPETENCIES

Languages: English (Fluent), Mandarin (Native)

Technical Skills: Python, SQL, R, Stata, Machine Learning, NLP, Git, Power BI.

HONORS & AWARDS

- Outstanding Student Scholarship (2022–2025)
- National Third Prize (Market Research, 2023)
- Provincial Second Prize (Statistical Modeling, 2023)
